Magnetrol ${ }^{\text {® }}$

## TOP MOUNTING

Liquid Displacer Level Switches

## DESCRIPTION

Magnetrol's displacement type level switches offer the industrial user a wide choice of alarm and control configurations. Each unit utilizes a simple buoyancy principle and is well suited for simple or complex applications, such as foaming or surging liquids or agitated fluids, and usually costs less than other types of level switches.

## FEATURES

- Narrow or wide level ranges achieved through multiple switch mechanism capability
- Maximum process temperature: $+260^{\circ} \mathrm{C}\left(500{ }^{\circ} \mathrm{F}\right)$.
- Maximum process pressure: 55,1 bar (800 psi).
- S.G. as low as $0.4 \mathrm{~kg} / \mathrm{dm}^{3}$.
- Displacers adjustable at any point along the suspension cable.
- Anti-surge design eliminates the possibility of switch short cycling.
- Standard $6 \mathrm{~m}(20 \mathrm{ft})$ of suspension cable, included for all models.
- Field adjustable set point and switch differential.
- Wide choice of displacer materials.
- Wide choice of housings and switch mechanisms
- Standard anti-corrosive protection.
- Optional:
- NACE construction (MR-01-75)
- Proof-er ${ }^{\oplus}$ ground check
- Floating roof models
- High pressure models
- Models for interface.
- Suited for SIL 2 loops (DPDT switch) (full FMEDA report available).

## APPLICATIONS

- Foaming or surging liquids
- Agitated fluids
- Sewage handling
- Dirty liquids
- Paints
- Varnishes
- Heavy oils
- Liquids with solids

Displacer level switches for single or multiple pump control/level alarm

AGENCY APPROVALS

| Agency | Approval |
| :--- | :--- |
| ATEX | II 2G Ex d IIC T6 Gb, flameproof enclosure <br> II 1G EEx ia IIC T6, intrinsically safe |
| CCE (1) | explosion proof and intrinsically safe |
| FM | Class I, Div. 1, Groups C \& D <br> Class II, Div. 1, Groups E, F \& G, Type NEMA 7/9 |
| FM/CSA ${ }^{(2)}$ | Non-Hazardous area |
|  | Explosion proof area - <br> Groups B, C, D, E, F \& G Type NEMA 4X/7/9 |

| Russian Authorisation Standards ${ }^{(2)}$ |  |
| Other approvals are available, consult factory for more details |  |

${ }^{(1)}$ For CCE approved units, use the ATEX model numbers.
(2) Consult factory for proper model numbers and classifications.

## PRINCIPLE OF OPERATION

## Standard controls

Operation is based upon simple buoyancy, whereby a spring is loaded with weighted displacers which are heavier than the liquid. Immersion of the displacers in the liquid results in buoyancy force change, which moves the spring upward. Since the spring moves only when the level moves on a displacer, spring movement (1) is always a small fraction of the level travel between displacers (2).
A magnetic sleeve (3) is connected to the spring and operates within a non-magnetic barrier tube (4). Spring movement causes the magnetic sleeve to attract a pivoted magnet (5), actuating a switch mechanism (6) located outside the barrier tube. Built-in limit stops, prevent over stroking of the spring under level surge conditions.

## Proof-er ${ }^{\circledR}$ controls

The purpose of the Proof-er is to check the operation of a displacer control without having to raise the level in the tank. This is accomplished by pulling downward on the Proof-er cable. This causes the spring loaded lever arm to lift the switch actuator, simulating a high or high high level condition. When the cable is released, the Proof-er ${ }^{\oplus}$ returns the actuator to its previous position to resume normal operation.

## MOUNTING

## Standard models

## Floating roof controls

The floating roof control is designed for installation on 'barrier' (floating roof) tanks. The control may be furnished with a brass displacer to prevent sparking. A stainless steel displacer is optionally available.

Floating roof models (with Proof-er ${ }^{\text {® }}$ as shown below)

AVAILABLE SWITCH MECHANISMS

| Type of switch module ${ }^{(1)}$ | Max. Process Temp. ${ }^{\text {(2) }}$ | Switch ratings - A res. ${ }^{(3)}$ |  |  | Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 24 V DC | 240 V AC | 120 V AC |  |
| Micro switch | $\max 120^{\circ} \mathrm{C}\left(250{ }^{\circ} \mathrm{F}\right)$ | 6 | 15 | 15 | $B / Q^{\text {® }}$ |
| Micro switch | $\max 230{ }^{\circ} \mathrm{C}\left(450{ }^{\circ} \mathrm{F}\right)$ | 6 | 15 | 15 | $\mathrm{C} / \mathrm{O}^{(5)}$ |

| Pneumatic bleed type (open air) | $\max 200{ }^{\circ} \mathrm{C}\left(400{ }^{\circ} \mathrm{F}\right)$ | NA | NA | NA | J |
| Pneumatic non bleed type (closed circuit) | $\max 200^{\circ} \mathrm{C}\left(400^{\circ} \mathrm{F}\right)$ | NA | NA | NA | K |
| Hermetically sealed micro switch | $\max 260{ }^{\circ} \mathrm{C}\left(500{ }^{\circ} \mathrm{F}\right)$ | 4 | - | 2,5 | F |
| Hermetically sealed micro switch | $\max 260{ }^{\circ} \mathrm{C}\left(500^{\circ} \mathrm{F}\right)$ | 3 | - | 1 | 8 |

${ }^{(1)}$ For applications with heavy vibration, consult factory for suited switch modules.
${ }^{(2)}$ Max process temperature is specified at $40^{\circ} \mathrm{C}\left(100^{\circ} \mathrm{F}\right)$ ambient temperature and for non condensing applications.
${ }^{(3)}$ For more details - see bulletin BE 42-120.
(4) For condensing applications, max process temperature is down-rated to $200^{\circ} \mathrm{C}\left(400^{\circ} \mathrm{F}\right) @ 40^{\circ} \mathrm{C}\left(100{ }^{\circ} \mathrm{F}\right)$ ambient.
${ }^{(5)} \mathrm{Q}$ and O are the equivalent switch modules for models C10/C15.

## Models A15 -

## Level alarm applications

 Narrow differential typeThese instruments are factory calibrated to operate over a narrow level differential band and are ideally suited for liquid level alarm applications, on either high or low level.
The operating level is fully adjustable by simply repositioning the displacer along its suspension cable.
The differential band is $\pm 51 \mathrm{~mm}\left(2^{\prime \prime}\right)$ in water and varies with liquid specific gravity.

Models A10 -
Pump or valve contro Wide differential type

These wide differential units are factory calibrated to actuate as a liquid level reaches a given displacer and to remain actuated until the level reaches a second displacer.
The minimum differential band is approximately $152 \mathrm{~mm}\left(6^{\prime \prime}\right)$ in water and varies with liquid
specific gravity.
The maximum differential is determined by the length of the displacer suspension cable.

## DUAL SWITCH MODELS

Models B15 Narrow differential type

These instruments utilize two switches, each actuated at a different level and each calibrated
with a narrow
differential band.

Models B10 Wide differential type

These wide differential tandem units are factory calibrated with a choice of several operating sequences.

Model B10 units are available factory calibrated with a choice of switch operating sequence. Five of the most popular sequences are described below.

When ordering B10 units, an operating sequence and specific gravity must be provided.

## PUMP CONTROL PLUS ALARM

## Arrangement $\mathbf{N}^{\circ} 1$ - fill with high level alarm

At the lowest level the pump starts. When the level rises to the middle displacer, the pump stops. If the level continues to rise, the upper displacer actuates the alarm switch which remains actuated until the level drops to the middle displacer.

## Arrangement $\mathbf{N}^{\circ} 2$ - drain with low level alarm

The sequence of arrangement $\mathrm{N}^{\circ} 1$ can be reversed to provide pump start at high level and pump stop at low level followed by low level alarm operation.

## CONTROL OF 2 PUMPS OF DIFFERENT CAPACITY

## Arrangement $\mathrm{N}^{\circ} 3$ - fill or drain

Two pumps are used to keep a tank filled. When the level falls to the middle displacer, a small $\mathrm{N}^{\circ} 1$ pump starts.
A second larger pump is started should the level continue to fall to the bottom displacer.

Top switch, wide differential adjustable PUMP 1

Bottom switch, wide PUMP 2

## CONTROL OF 2 PUMPS

## Arrangement $\mathrm{N}^{\circ} 4$

In this sequence $\mathrm{N}^{\circ} 1$ pump starts as the level rises to the middle displacer. Should the level continue to rise to the upper displacer, $\mathrm{N}^{\circ} 2$ pump is actuated. Both pumps operate until the level is dropped to the lower displacer.

## Arrangement $\mathrm{N}^{\circ} 5$

The pumping sequence of Arrangement $\mathrm{N}^{\circ} 4$ can be reversed for a pump "fill" application.

Models C10
Wide differential type
These wide differential type switches are designed to provide three electrically separate control signals in sequence as liquid level varies.
These units are factory calibrated with a choice of several sequences.

Models C15
Narrow differential type
These instruments are factory calibrated to operate over a narrow level band while providing three electrically separate control signals in sequence as liquid level varies.

## OPERATING SEQUENCES

Model C10 units are available factory calibrated with a choice of switch operating sequence. Seven of the most popular sequences are described below.

Arrangement A

Arrangement B

Arrangement C

Arrangement D

Arrangement E

Arrangement F

Arrangement G

When ordering C15 units, a specific gravity must be provided.

## SELECTION DATA

Narrow Differential: for actuation of an alarm or system shutdown - up to 3 setpoints.
Wide Differential: switch differential for valve or pump control - up to 3 pump control functions.

Specific gravity limits - not for floating roof models.

| P.N. <br> code | Liquid temp. |  | Specific gravity - ranges |  |  |  |  |  |  |

## EXPEDITE SHIP PLAN (ESP)

Several models are available for quick shipment, within max. 4 weeks after factory receipt of purchase order, through the Expedite Ship Plan (ESP).
Models covered by ESP service are conveniently colour coded in the selection data charts
To take advantage of ESP, simply match the colour coded model number codes (standard dimensions apply).
ESP service may not apply to orders of five units or more. Contact your local representative for lead times on larger volume orders, as well as other products and options.

## SELECTION DATA

A complete measuring system consists of:

1. Order code for standard models (each unit is factory calibrated to operate on a given specific gravity within the min and the max values listed per model) or
2. Order code for floating roof models.
3. Order code for standard displacer switches

BASIC MODEL NUMBER

- units for ALARM use ONLY

| A | 1 | 5 | One adjustable set point (fixed narrow differential) |
| :--- | :--- | :--- | :--- |
| B | 1 | 5 | Two adjustable set points (fixed narrow differentials) |
| C | 1 | 5 | Three adjustable set points (fixed narrow differentials), specify specific gravity of medium separately |

- units for ALARM/PUMP control use

| A | 1 | 0 | One adjustable wide differential |
| :--- | :--- | :--- | :--- |
| B | 1 | 0 | Two adjustable wide differentials, specify operating sequence and specific gravity separately (see p. 5 \& 8) |
| C | 1 | 0 | Three adjustable wide differentials, specify operating sequence and specific gravity separately (see p. 7 \& 8) |

## QUALITY ASSURANCE - ISO 9001:2008

THE QUALITY ASSURANCE SYSTEM IN PLACE AT MAGNETROL GUARANTEES THE HIGHEST LEVEL OF QUALITY DURING THE DESIGN, THE CONSTRUCTION AND THE SERVICE OF CONTROLS.
OUR QUALITY ASSURANCE SYSTEM IS APPROVED AND CERTIFIED TO ISO 9001:2008 AND OUR TOTAL COMPANY IS COMMITTED TO PROVIDING FULL CUSTOMER SATISFACTION BOTH IN QUALITY PRODUCTS AND QUALITY SERVICE.

## PRODUCT WARRANTY

ISO-9001:2008 REGISTERED FIRM
DNV Certification B.V., THE NETHERLANDS
ALL MAGNETROL MECHANICAL LEVEL CONTROLS ARE WARRANTED FREE OF DEFECTS IN MATERIALS AND WORKMANSHIP FOR FIVE FULL YEARS FROM THE DATE OF ORIGINAL FACTORY SHIPMENT.
IF RETURNED WITHIN THE WARRANTY PERIOD; AND, UPON FACTORY INSPECTION OF THE CONTROL, THE CAUSE OF THE CLAIM IS DETERMINED TO BE COVERED UNDER THE WARRANTY; THEN, MAGNETROL INTERNATIONAL WILL REPAIR OR REPLACE THE CONTROL AT NO COST TO THE PURCHASER (OR OWNER) OTHER THAN TRANSPORTATION
MAGNETROL SHALL NOT BE LIABLE FOR MISAPPLICATION, LABOR CLAIMS, DIRECT OR CONSEQUENTIAL DAMAGE OR EXPENSE ARISING FROM THE INSTALLATION OR USE OF THE EQUIPMENT. THERE ARE NO OTHER WARRANTIES EXPRESSED OR IMPLIED, EXCEPT, SPECIAL WRITTEN WARRANTIES COVERING SOME MAGNETROL PRODUCTS.
