

# Datasheet Ball segment valve KVTW-A/KVXW-A

**Si-113 EN** 

Edition: 2021-01

- Control and shut-off valve
- High capacity
- One-piece shaft gives torque transmission free of backlash
- Excellent tightness irrespective of differential pressure
- Easy maintenance

#### **Option**

- V-port MC
- Low noise

Type KVTW-A/KVXW-A: Wafer design Standard face to face dimension

Nominal pressure: PN 10/16/25/40, Class 150/300 PN 10/16/25, Class 150

Nominal size: DN 25-65 DN 80 - 250

# **Product Information**

The SOMAS ball segment valve type KVTW with a centrically mounted shaft, and KVXW with an eccentrically mounted shaft are of wafer design. The valve called the A-version is manufactured in standard face to face dimensions common in certain markets.

The valve is also manufactured in D-type version with a short face to face dimension. (See Si-114).

The valve body is in one piece. SOMAS unique shaft device is designed for torque transmission and gives backlash-free operation with accurate control. The spring-loaded seat is available in three alternative materials (PTFE, PTFE 53 and HiCo [High Cobalt Alloy]).

The valves can be used for control, as well as for shut-off applications on practically every type of media within a wide temperature range.

Choose KVTW for liquids, media containing impurities etc. For dry and clean media choose KVXW. In the KVXW-valve the ball segment is eccentrically mounted and rotates out from the seat when the valve is opened. This reduces the wear on seat and segment.

Low noise trim is available as an option on DN50 to DN250. The designation "LN" indicates that the ball segment is equipped with a network of bars that are used to split up the pressure drop across the valve. This results in less pressure recovery, thereby reducing the noise and potential damage due to cavitation.

Note! Capacity factors will be reduced for valves with LN-trim.

Ball segment DN50 to DN250 with V-groove is available for use at high fiber concentrations. The V-groove design prevents dewatering at small opening angles.

The SOMAS valves are delivered ready for installation and operation. The valve assemblies are delivered factory tested as complete units with actuators, positioners and accessories.

# **Option**

Within the process industry and the energy sector there are a number of applications where process data in combination with standard control valves will end up with problems such as high noise level and erosion. These issues are mostly related to cavitations and high flow velocities inside the valve.

Note! By using a standard ball segment valve and add a noise reduction trim many of the above mentioned issues can be solved.

See data sheet Si-108 for more theoretical information.

For controlling suspensions with high fiber concentrations it can be advantageous to use valves with a V-groove to reduce the risk of de-watering at small opening angles.

Capacity factors and remaining factors for valves with LN-trim and valves with V-groove are available in the valve sizing program SOMSIZE.

Low noise

Edition: 2021-01 Si-113 EN

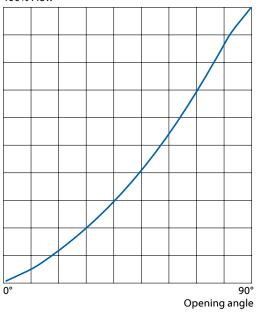

#### **Tightness class**

The tightness class is related to the chosen material in the seat ring.

Standard leakage class	Optional leakage class
EN 60534-4	EN 60534-4
PTFE - Class V	PTFE - Class VI
PTFE 53/PEEK - Class V	HiCo - Class V
HiCo - Class IV-S1	
	EN 12266-1
	PTFE - Rate C
	PTFE - Rate D
	PTFE 53/PEEK - Rate D
	HiCo - Rate E
	HiCo - Rate F

100	20	150	120	200	A22-DA	A21-DA	No HiCo	A23-SC/SOL	A23-SC/SOL	
150	25	250	185	370	A23-DA	A22-DA		A24-SC/SOL	A24-SC/SOL	
200	30	400	295	640	A24-DA	A23-DA	No HiCo	A33-SC/SOL	A24-SC/SOL	No HiCo
250	35	600	449	1000	A32-DA	A31-DA	No HiCo	A33-SC/SOL	A33-SC/SOL	

No HiCo ="No HiCo seats" Valves with HiCo seats should not use PN10 actuators. PTFE/PTFE53 is OK

SC/SCL = Spring to close at air failure SO/SOL = Spring to open at air failure

#### **Face to face dimension**

According to Industrial branch standards, standard face to face dimension.

#### Flange standard

SOMAS ball segment valves type KVTW DN 80–250 and KVXW with nominal size DN25–250 are flangeless and should be clamped between flanges. When ordering, please always state the pressure rating of the counter flanges. See the valve specification system code 13.

#### **Ordering**

State desired valve according to the valve specification system as well as type of actuator, positioner and accessories.

#### **Further technical information**

Technical data for the materials used in the SOMAS valves, flange standard, steam data, etc. can be found in documents library on www.somas.se.

#### **Actuators and accessories**

The valves can be fitted with SOMAS manual, on/off or control actuators in accordance with the selection table. The valves will then be delivered as tested units ready for installation.

In the documents library on www.somas.se there is also information about positioners, limit switches and solenoid valves.

We can also fit other types of actuators and accessories in accordance with your specification.

#### Valve sizing

Use SOMAS valve sizing program SOMSIZE to find the correct valve size. All sizing factors are included in the program.

#### Valve specification system

**KVTW** -  $\frac{A}{2} \frac{5}{3} - \frac{A}{4} \frac{J}{5} \frac{A}{6} - \frac{B}{7} \frac{1}{8} \frac{1}{9} - \frac{DN...}{10} - \frac{D...}{11} - \frac{B...}{12} - \frac{PN...}{13}$ 

1 Type of valve

KVTW (centrically mounted segment) KVXW<sup>2</sup> (excentrically mounted segment)

KVTW LN¹ (centrically mounted segment, Low Noise)

KVXW LN¹ (excentrically mounted segment, Low Noise)

A = Wafer style design according to branch standard

KVMW (ball segment with V-groove)

5 Material - segment

F = 1.4307 alt. 1.4309
